WatchGuard™

THE WATCHGUARD® FIREBOX® SYSTEM

HIGH PERFORMANCE NETWORK SECURITY FOR SMALL TO MID-SIZED BUSINESSES

The WatchGuard Firebox System is a powerful security solution that gives you integrated firewall protection and VPN support. Firebox Systems are easy to install and can be securely managed from a central location anywhere on the Internet. Every Firebox System includes a Firebox appliance, comprehensive management and monitoring software, a one-year hardware warranty, and a renewable LiveSecurity® Service subscription to keep your system up to date.

FIREBOX SYSTEM SECURITY FEATURE HIGHLIGHTS

WatchGuard's award-winning Firebox System includes a wide array of security features to meet the needs of small and medium-sized businesses, central offices, and VPN hubs.

- **POWERFUL APPLICATION PROXIES**
- **SIMPLIFIED VPN MANAGEMENT**
- **SECURE REMOTE MANAGEMENT**
- **BUNDLED SECURITY SOLUTIONS**
- **PROACTIVE SUPPORT THROUGH LIVESECURITY SERVICE SUBSCRIPTION**

FIREWALL SECURITY

- **Firewall Software** includes stateful packet filtering and application proxies* that examine entire data streams to detect and remove dangerous attachments. The Firebox System includes SMTP, HTTP, DNS, and FTP proxies, and PPPoE/DHCP support for DSL or cable connections.
- **Firewall User Authentication*** enforces access policies based on users or groups. The Firebox System authenticates against the built-in WatchGuard authentication server, Windows NT®, RADIUS®, SecurID®, and CRYPTOCARD®.
- **Network Address Translation** hides internal IP addresses for increased security, simplifies IP address management, and reduces the need for public IP addresses. Firebox III models support Dynamic, Static, and One-to-One NAT.
- **Web Content Filtering** controls Web access for users or groups, using a regularly updated database. WatchGuard's WebBlocker™ (optional with Firebox SOHO models included with all Firebox III models) manages Web usage in a small or remote office.
- **High Availability** (optional for Firebox III models) allows you to install a standby Firebox appliance for failover protection. The standby unit must be the same model as the original unit.

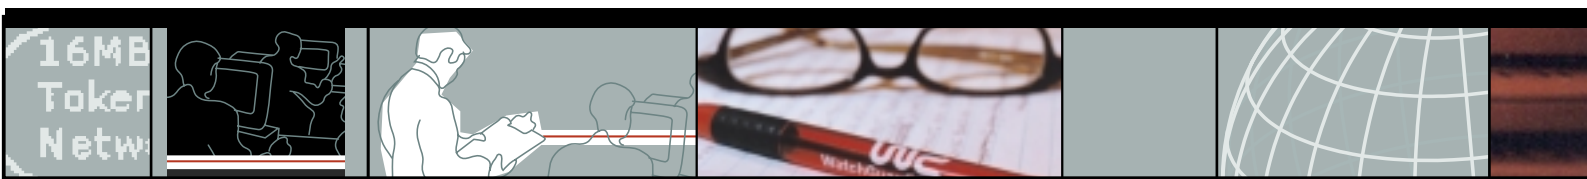

VPN SUPPORT

- **Streamlined VPN** routes VPN traffic to multiple endpoints using a single VPN tunnel.
- **Mobile User VPN** gives remote employees secure IPSec-compliant VPN connections and a personal firewall with configurable access rules and security levels. Mobile User VPN software runs on any Windows® 98/2000/XP or Windows NT workstation. Firebox models 1000 and 2500 include a 5-user license. Firebox 4500 includes a 20-user license.
- **VPN User Authentication*** enforces VPN policies based on users or groups, authenticating against the built-in WatchGuard authentication server, Windows NT, and RADIUS.
- **PKI Certificates*** issued by the WatchGuard internal certificate authority, authenticate VPN Tunnels.

* Not supported on Firebox SOHO models

DESKTOP SECURITY

- **McAfee® VirusScan® ASaP** from WatchGuard and McAfee Security. Your Firebox product comes with a limited number of McAfee VirusScan ASaP licenses. Additional licenses are available from your WatchGuard reseller. When you buy anti-virus protection through WatchGuard, you receive anti-virus

central management and expertise through your LiveSecurity Service subscription.

- **SpamScreen®** (optional) screens junk e-mail.

SECURITY SERVICES

- **LiveSecurity Service** keeps your security system up-to-date. Every WatchGuard Firebox System includes a renewable subscription to our LiveSecurity Service, which is backed by a team of world-class security experts, technical support representatives, and trainers. Your subscription includes threat alerts and responses, software updates, support flashes, expert editorials, technical support, and online self-help tools.
- **LiveSecurity Service Gold** (optional) offers service levels that meet the needs of heavily Internet-dependent customers. LiveSecurity Service Gold includes 24/7 technical support, target one-hour maximum response time, and direct access to our Priority Support Team.
- **Limited Hardware Warranty Extension Program** allows you to extend your original hardware warranty for an additional year.
- **WatchGuard Training** (optional) offers a broad spectrum of online and classroom courses, certification programs, and publications to anyone who wants to learn more about network security and WatchGuard products.

FIREBOX SYSTEM MANAGEMENT HIGHLIGHTS

WatchGuard's award-winning management software simplifies the creation and administration of complicated security policies. Our flexible software suite lets you manage securely from a central location inside or outside your trusted network, even from your laptop!

- **The Firebox Secure Management Software** secures management sessions using 3DES encryption, which allows you to configure network security with confidence from inside or outside your trusted network.

- **VPN Manager** creates VPN tunnels between central and branch offices in three easy steps, dramatically reducing the complexity of multi-site VPN management. Configure security policies to limit network access and ensure secure VPN Extranets. A VPN Manager 4-node license is included with Firebox models 1000, 2500, and 4500. VPN Manager is not supported on the Firebox 700.
- **Centralized Logging and Log Failover Capability** gives you reliable encrypted logs, ensures that traffic data is always available, and gives you a view of all installed devices from a single management station. Syslog (UDP) and reliable encrypted TCP-based logging allow the export of logs to third party reporting applications such as WebTrends®.
- **Monitoring and Reporting** let you closely scrutinize your network traffic. Reports can be generated based on a wide range of criteria.

FIREBOX SYSTEM OPTIONS

There are several optional products that further enhance Firebox System security solutions.

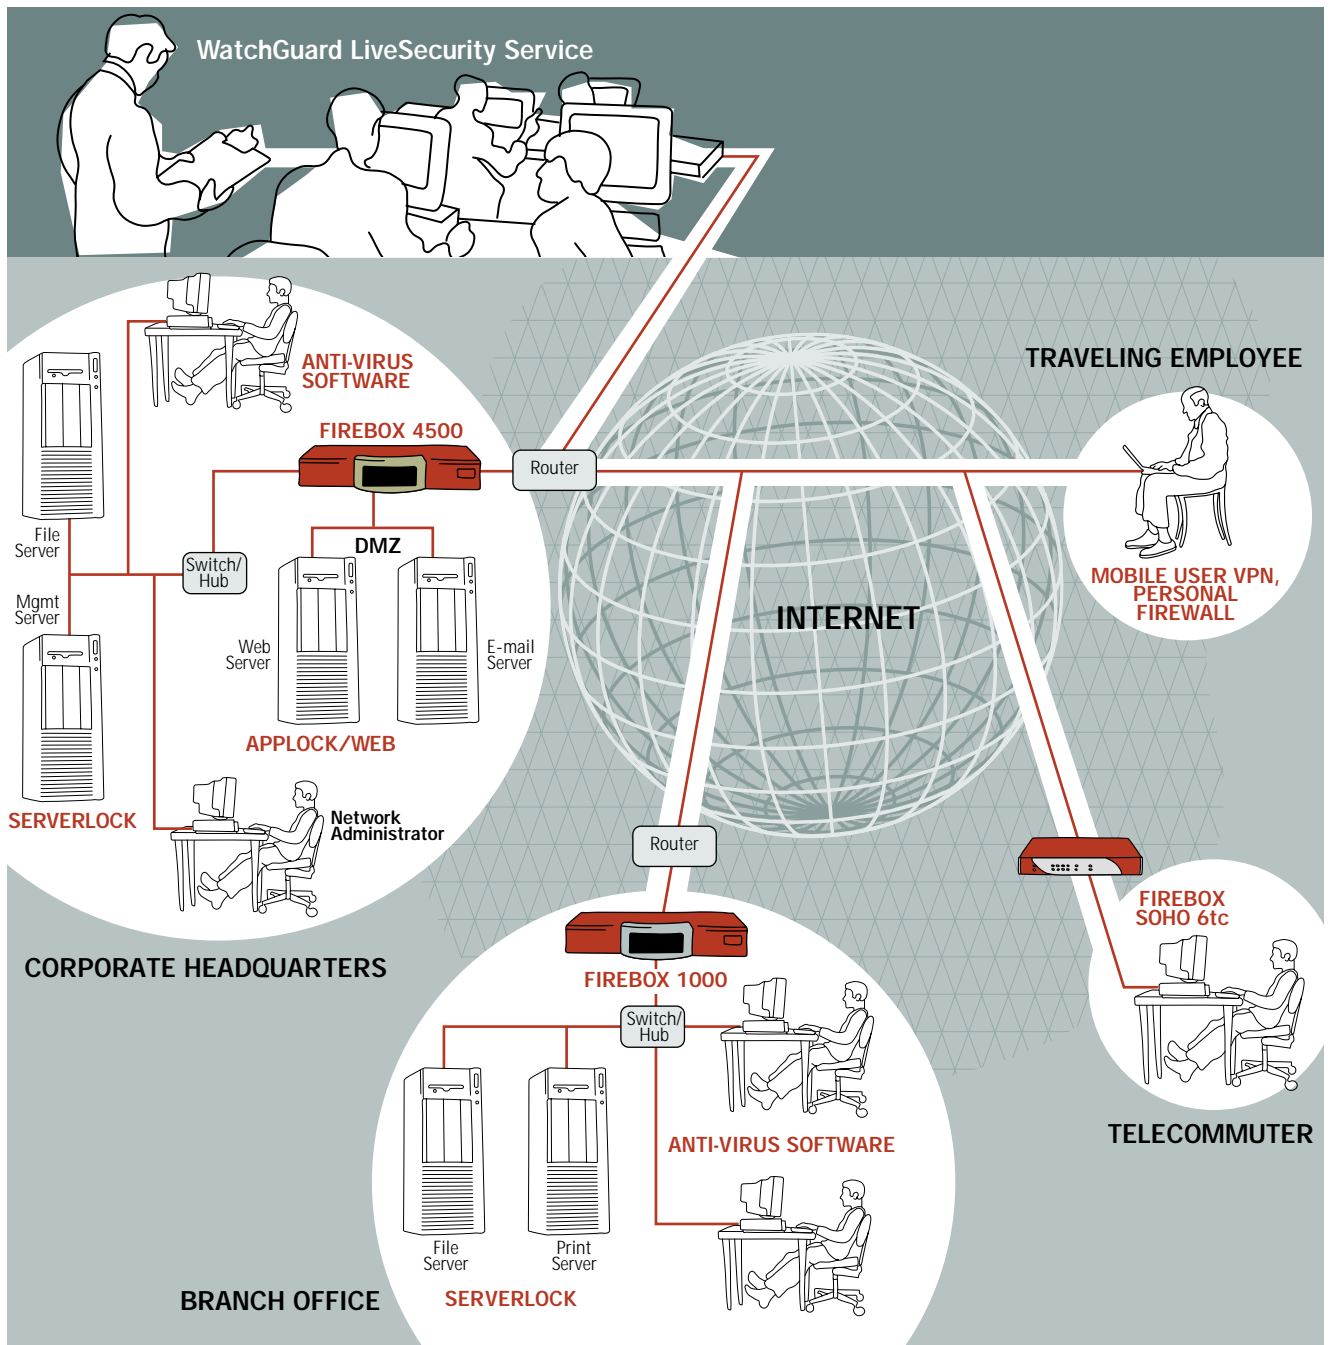

- **VPN Manager**
- **McAfee VirusScan ASaP**
- **LiveSecurity Service Gold**
- **SpamScreen**
- **WatchGuard Mobile User VPN**
- **High Availability**
- **WebBlocker™** for Firebox SOHO models
- **Limited Hardware Warranty Extension Program**
- **WatchGuard Training**

FIREBOX SYSTEM CERTIFICATION

WatchGuard's VPN and firewall technologies comply with published standards, making our products easy to integrate into existing security solutions. The WatchGuard Firebox System is certified to the ICSA firewall and IPSec VPN standards, as well as the Common Criteria EAL-2 standard.

FIREBOX® SYSTEM CERTIFICATION

WatchGuard's VPN and firewall technologies comply with published standards, making our products easy to integrate into existing security solutions. The WatchGuard Firebox System is certified to the ICSA firewall and IPSec VPN standards, as well as the Common Criteria EAL-2 standard.

ABOUT WATCHGUARD®

WatchGuard (Nasdaq: WGRD) is a leading provider of dynamic, comprehensive Internet security solutions designed to protect enterprises that use the Internet for e-commerce and secure communications. Thousands of enterprises worldwide use WatchGuard's award-winning products and services. These products include our Firebox firewall and VPN appliances for access control and secure communications, and our ServerLock technology and anti-virus solution for content and application security for servers and desktops. Centralized point-and-click management makes it easy for even the non-security professional to install, configure and monitor our security solutions. Our innovative LiveSecurity Service also enables our customers, with minimal effort, to keep their security systems up-to-date in a continuously changing environment.
